

# Cyber Safety

---

## Student Workshops

---

The internet is a vital way of staying connected in the modern world, for both adults and children alike. With this growing connectivity, however, comes a growing number of risks, which you must know how to prevent. To empower students to navigate the online world safely, we are providing workshops over the next fortnight for students. These workshops will greatly help students to be safe, confident explorers of the online world. The Workshops will be delivered by [Computing at Schools](#) over a two hour session to each year group.

The workshop will build on the great work being done by teachers in SPHE and CSPE in focusing students on their responsibilities around the use of social media and the web in general. We encourage parents to discuss the content of these workshops with their son. In advance of the day you can find additional resources at the following link.
